Customizable	No
Country of origin	China

OVERVIEW

The split ring end fitting provides a secure attachment point for keys, key rings, key fobs, USB tokens, small tools, and other accessories alongside or instead of credentials. The breakaway connector separates at the back of the neck, allowing the lanyard to release from the wearer without the split ring detaching from the credential or accessory. The flat, compact, and sturdy design was specifically designed for discreet carry under or on top of uniforms. Government, police, security, and federal uniform programs (FAA, TSA, FDA, DEA) use this lanyard when personnel carry key fobs, access tokens, or physical keys alongside their credentials.

KEY FEATURES

- **48-Thread Flat Braid Polyester:** High-thread-count flat braid construction provides a softer, more comfortable feel against the skin compared to standard-weave lanyards.
- **Breakaway Safety Connector:** Color-matching breakaway designed to release when pulled apart, releasing cleanly when snagged in environments where snagging is a concern.
- **Split Ring End Fitting:** Accommodates keys, key rings, key fobs, USB tokens, and small accessories alongside or instead of credentials on a single lanyard.
- **Best For:** Government, police, security, and federal uniform programs, plus corporate ID and healthcare facilities where personnel carry keys or access tokens alongside credentials.
